

PROJECT PROFILE:

EQUINIX SG4 Data Centre

Overview

The EQUINIX SG4 Data Centre is a seven-storey building which houses more than 4,000 cabinets at full build out, with a total colocation space of approximately 12,280m². The USD90 million investment by EQUINIX is the fourth centre that has opened in Singapore with the purpose of creating more business opportunities while catering to the increased demand for cloud and interconnection services.

Nullifire SC902 was chosen for its unique patented hybrid intumescent coating technology, fast cure and tack free properties. This hybrid nature is a distinct innovation in the market, and Nullifire is proud to be the inventor of this technology, which by far is the only one to offer such valued features.

Nullifire SC902's fast drying characteristics and early weather resistance also helped to speed up the project which in turn increased construction efficiency and improved cost-saving.

With a proven track record and serviced by trained specialist applicators, **Nullifire SC902** was chosen as the ideal fire protection solution for the structural steel members in the EQUINIX SG4 Data Centre.

Completion Date February 2020

Project Type IT Data Centre

Project Size 4,000 m²

Products Used Nullifire SC902

Country Singapore

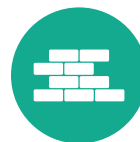

Fast-cure: early weather resistance, shower-proof within 1 hour.

Fire rating up to 120 minutes and tested to BS476 and EN13381: Part 8

Low VOC, high-build system with all ratings possible in one application.

Optimised for on-site application.
