

PROJECT PROFILE:

Premium Housing in Surabaya

Overview

This premium housing project is a house located in Surabaya, a bustling city in the East Java region of Indonesia. New clusters of housing developments are ongoing in the Kertajaya Indah Regency area as it is envisioned to become an up-and-coming neighbourhood for affluent local residents.

Construction work on the three-storey prestige private house began in early 2020 and the owner required a double protection system for his property, in particular the roof.

Due to his positive experiences with Tremco products from previous building projects, the owner specified for the roof to be waterproofed using **TREMproof 201/60** because of its proven track record. **TREMproof 201/60 with anti-root additives** were also added to certain sections of the roof top garden to prohibit growing roots from affecting the overall performance of the waterproofing membrane.

Lastly, to enhance the waterproofing protection, **Vulkem 351** was applied as a top coat because its fast cure time allows for use 24 hours after installation. As an area with light foot traffic, the excellent durability and high UV resistance provided by **Vulkem 351** will also extend the life of the roof.

Completion Date	September 2020
Project Type	Premium Housing
Total Product Area Applied	2,000 m ²
Products Used	Vulkem 351 TREMproof 201/60 TREMproof 201/60 with Anti-Root Additives
Country	Indonesia

Safeguards against environmental contaminants.

Excellent durability and longstanding protection.

Superior elongation performance.

Fast cure time allows for use 24 hours after installation.
