

PROJECT PROFILE:

Tempo Kera Sakti 5 Factory

Overview

The Tempo Kera Sakti 5 project comprises of two buildings that span over 17,000 m². The development includes a two-storey office space and an adjacent nine-storey factory that manufactures dairy products.

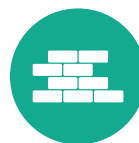

Located in the industrial area of Cikarang, West Java Indonesia, the new build will house a food processing facility, production lines, cold room storage, and a quality control room.

TREMproof FBM and **TREMproof 250GC** were specified by Royal Haskoning, the architectural firm that worked on this project and also one of Jakarta's most renowned architect company.

TREMproof FBM was chosen for installation on the basement slab because its multi-layer composite provides superior waterproofing, even in contaminated and aggressive ground conditions. The membrane forms a unique integral seal to concrete poured against it, preventing lateral water migration and ensuring complete watertightness.

TREMproof 250GC was installed in the back filled walls. The fluid-applied membrane is suitable for application on damp concrete and its rapid curing properties helped fast track the working schedule and save time .

Completion Date	November 2021
Project Type	Factory & Office
Project Size	955 m ²
Products Used	TREMproof FBM TREMproof FBM Adhesive TREMproof FBM Tape TREMproof 250GC
Country	Cikarang, Indonesia

Fully compatible waterproofing solutions.

Zero permeance to moisture.

Highly chemical resistant and effective in all types of soils and waters.

Easy installation on permanent formwork.
