

PROJECT PROFILE: Summitmas Car Park Building

Overview

Situated in the heart of Jakarta's business district are two office buildings owned and operated by PT. Summitmas Property. Built in the mid-1980s, the buildings have connected multi-storey car parks with a combined total of more than 5,000 parking lots for cars and motorcycles.

After decades of wear and tear, the client wanted to refurbish the car parks and decided to apply Tremco's **Vulkem 346** deck coating system throughout the decks and ramps. This aliphatic, one component polyurethane traffic coating system affords excellent abrasion, chemical resistance, and complete waterproofing protection.

Vulkem 346 also possesses high UV stability, protecting the intermediate decks and exposed rooftop from yellowing. Furthermore, its fast cure through time allows for car parking operations to resume as soon as 72 hours after installation.

Additionally, **Deckshield UV line marker** was also used to demarcate the various types of lots, traffic signage, and bay numbering.

The finished system in Slate Grey provided a fresh and updated aesthetic which transformed the area into a safe and modern car park facility.

Completion Date	Dec 2022
Project Type	Commercial Office Building
Project Size	7,944 m ²
Product(s) Used	Vulkem 346 Deckshield Line Marker
Country	Indonesia

Excellent UV resistance.

Complete waterproofing protection.

Fast cure through time.

Safeguards surfaces against environmental contaminants.

Brands Used:  **TREMCO**

Flowcrete
for the world at your feet
